With over a decade of experience in UX/UI design across a wide variety of industries and organisations, from startups to massive multinational corporations, my goal is to help you get out of your user's way.

Experience

Lead Product Designer

Kaisa (formerly Freespee) Remote, Sweden June 2022 – present

Spearheaded a full product rebrand to support market repositioning, aligning design direction with evolving business strategy and presenting regularly to board and exec stakeholders.

Defined and documented a UX strategy that shaped the product roadmap and guided prioritisation across multiple product squads.

Modernised the Figma component library and introduced scalable design tokens, reducing handoff friction and speeding up development by ~30%.

Partnered closely with engineers, contributing production-level code and driving a tighter design–dev feedback loop.

Embedded AI into the design process to produce prototypes and tools faster than by using the traditional design process.

Senior Product Designer

Cytiva Remote, Sweden September 2020 – June 2022

Drove UX for the next-gen ÄKTA scientific instrumentation platform, balancing user needs, regulatory compliance, and hardware-software integration.

Pitched and delivered VR-based prototyping tools for complex lab workflows, winning an internal innovation hackathon and reducing prototyping costs by 40%.

Scaled the global design team by mentoring new hires and contributing to interview and onboarding processes.

Embedded design thinking into regulated product development cycles, introducing observation-based research practices and usability testing protocols.

Contributed to multiple design award wins by elevating user-centric thinking within traditionally engineering-led programs.

Senior Product Designer

Husqvarna Remote, Sweden February 2019 – June 2020

Led design initiatives for IoT-connected garden products and management systems, including a watchOS prototype for Automower customers.

Set up Husqvarna's first in-house prototyping lab, reducing iteration cycles by 50% and enabling direct testing with end-users.

Established and ran a test station at HQ, collecting longitudinal feedback on ergonomics and accessibility that informed two new product lines.

Delivered strategic presentations to align global teams on design vision, product strategy, and technical feasibility across markets.

Introduced cross-functional rituals and design documentation standards, improving design–engineering alignment across three business units.

Earlier...

Prior to relocating to Sweden, I held a wide range of roles in the tech field. I led a team of 10 designers/engineers working on MedTech projects, and led the design team that worked on Britain's first passenger-carrying drone. At Black Kite Technology, I was involved in the creation of military flight simulators, with a strong emphasis on user research. I also embarked on entrepreneurial ventures, founding Simly, a flight simulation device startup, and DTID, a cross-disciplinary design/development consultancy that worked with clients including Lloyds Bank, British American Tobacco, and Asda.

Education

BA (Hons) – first class

Product and Interaction Design

University for the Creative Arts

MA – pass

Advanced Product Design

University for the Creative Arts

Languages

English 🇬🇧 Native

Swedish 🇸🇪 Basic

Skills

Figma / XD / Sketch / Adobe

Frontend development

UX/UI design and strategy

Proptotyping and wireframing

Agile / JIRA

User research

Team leadership

Stakeholder communication

Regulatory compliance
